

追查迫害法輪功國際組織

World Organization to Investigate the Persecution of Falun Gong

To investigate the criminal conduct of all institutions, organizations, and individuals involved in the persecution of Falun Gong; to bring such investigation, no matter how long it takes, no matter how far and deep we have to search, to full closure; to exercise fundamental principles of humanity; and to restore and uphold justice in society

WOIPFG Releases the First List of Medical Personnel Suspected of Extracting Organs from Living Falun Gong Practitioners

October 14, 2014

Since 2000, hospitals in mainland China, regardless of size, specialty, location and qualification, started to perform human organ extractions for transplantation. The timing highly coincides with the genocidal persecution of Falun Gong by the Chinese regime.

Based on incomplete statistics gathered by WOIPFG, over 800 hospitals in mainland China have conducted human organ transplants. By September 2014, roughly 176,267 kidney transplants, 40,170 liver transplants, 1,928 heart transplants and 137,294 corneal transplants were performed.

WOIPFG's investigation into the organ extraction procedures, such as the warm ischemia time and the "donors" health condition, shows that the majority of the "donors" were alive when the organs were removed. The large numbers of captive Falun Gong practitioners are likely the "donors." The organ removal procedure has become an execution method.

Live organ harvesting is against medical ethics and the law. The CCP's persecution of Falun Gong is a crime against humanity and genocide. Any individual involved in the persecution must be held accountable.

Due to the fact that the "donor" would not survive after the heart, liver, lung or both kidneys are extracted, there is no direct testimony from the "donor." It is thus not feasible to require a direct testimony from the victims.

Since 2006, the Chinese regime has been claiming that the majority of organs came from executed prisoners. But the decreasing number of executed prisoners cannot explain the increasing number of transplants.

Prior to 2010, no voluntary organ donation program and almost no donors existed in China. The first organ donation trial program started in 2010 and went into operation since March 19, 2014. The vast majority of transplants performed in China since 2000 do not have organ sources.

Therefore, all medical personnel involved in organ extractions are suspected of harvesting organs from Falun Gong practitioners. Before one can provide clear evidence to prove otherwise, all medical personnel are either considered eye witnesses or are suspected of committing crimes against humanity, crime of murder, and crime of genocide.

WOIPFG hereby start investigation and release details of 2,007 medical personnel from 231 hospitals in mainland China.
