

## 追查迫害法輪功國際組織（追查國際）

### World Organization to Investigate the Persecution of Falun Gong (WOIPFG)

To investigate the criminal conduct of all institutions, organizations, and individuals involved in the persecution of Falun Gong; to bring such investigation, no matter how long it takes, no matter how far and deep we have to search, to full closure; to exercise fundamental principles of humanity; and to restore and uphold justice in society.

### Investigation Recording 2020-076

**Date:** May 21, 2020 (+86-2081292163)

**Subject(s):** Doctor Huang Xian'en, Urology and Transplant, the Third Affiliated Hospital, Guangzhou Medical University

### Summary

1. You can make an appointment with me, and I come to the clinic on Mondays.
2. My name is Huang Xian'en. My cell phone number is 13503006786.
3. As for the total cost, you'd need to come up with about 400,000 yuan. If things go smoothly, that would be about right. If there are certain complications that happen, that would be hard to say.
4. Investigator: What needs to be paid for the kidney source in the early phase cannot go through the procedure, and cannot be reimbursed, right?  
Doctor Huang Xian'en: Right, that's right.
5. Investigator: So how much can we reimburse from those expenses for both the hospitalization and the postoperative medication?  
Doctor Huang Xian'en: About 100,000 yuan.
6. Investigator: Can we still find those (Falun Gong practitioners' organs)?  
Doctor Huang Xian'en: Yeah, but it is difficult!

7. Right now overall quality of donors is not as good as (the Falun Gong donors before), which would have its implications in the long run, but it's still okay.
8. Investigator: Could you help me find those Falun Gong donors?  
Doctor Huang Xian'en: Then you have to wait, wait till there is a good one available, and then you can get it done.

### **Translation**

Nurse: Hi, hello, Urology and Transplant.

Investigator: Uh, hello, may I ask, uh, is this the Third Affiliated Hospital of Guangzhou Medical University?

Nurse: Urology and Transplant.

Investigator: Uh, Urology and Transplant. Hello. You are a doctor, are you?

Nurse: Uh, no. What can I do for you? Which doctor are you looking for?

Investigator: Well, I was wondering, yeah, if I should go to Guangzhou with my family member, to find a hospital for a kidney transplant. I'd like to know if we come over, what would be the procedure for us to follow.

Nurse: Kidney transplant? Just one minute!

Investigator: Okay.

(Nurse talking to a man: Doctor Huang, she called and wants to ask about a kidney transplant, what procedure to follow? Could you talk to her?)

Doctor Huang Xian'en: Hello?

Investigator: Hi, hello. Hello Doctor. What's your last name?

Doctor Huang Xian'en: Mine is Huang.

Investigator: Ah, hello Doctor Huang. I have a question. We are in Zhuhai. We want to go to Guangzhou and find a hospital, to get a kidney transplant done for my family member. So what procedure do we have to go through?

Doctor Huang Xian'en: It's like this. For such an operation, first we need to make a preoperative assessment, to see whether it can be done. We will look at your case, if it meets all the requirements, if it can be done, we will get you registered in the network.

Investigator: Ah.

Doctor Huang Xian'en: What, what is the blood type?

Investigator: Blood type B.

Doctor Huang Xian'en: Blood type B?

Investigator: Yeah. So if we get registered in the network, then how long do we have to wait before the operation?

Doctor Huang Xian'en: If we do the tissue typing, it would be hard to say. Sometimes, if the tissue typing works well, it would be quick. Otherwise, we wouldn't consider the case, either.

Investigator: Well, if we, we go there to make an appointment, whom should we make an appointment with?

Doctor Huang Xian'en: You can make an appointment with me. I come to the clinic on Mondays.

Investigator: Oh, on Mondays. What weekday is today?

Doctor Huang Xian'en: Today is Thursday.

Investigator: So, you are Huang...how should I address you? What's your full name?

Doctor Huang Xian'en: Huang Xian'en.

Investigator: Oh. Huang Xian'en. On Mondays, come look for you.

Doctor Huang Xian'en: Yeah.

Investigator: Well, I can look for you for a kidney transplant. Do you do such an operation?

Doctor Huang Xian'en: Yes.

Investigator: Oh, you do. Good.

Doctor Huang Xian'en: Yeah.

Investigator: Well, I have a question. As we need to prepare the money, if we get it done at your place, roughly how much money shall we prepare? Because our hometown is in the Northeast....

Doctor Huang Xian'en: For the total cost, you'd need to come up with about 400,000 yuan.

Investigator: About 400,000 yuan. Is that enough for the whole procedure? I am asking about...according to my neighbor, in the early stage, a portion of the money needs to be paid for the kidney source; then another portion covers the hospital fee, and then the post-operation maintenance cost follows.

Doctor Huang Xian'en: If things go smoothly, that would be about enough. But if not, it would be hard to say. If there are certain complications that happen, that would be very hard to say.

Investigator: Okay. So, as you said, for what needs to be paid for the kidney source in the early stage, as I heard from my neighbor, it cannot go through the procedure, well, it cannot be reimbursed, either. Is that right? I mean the liver source in the early stage.

Doctor Huang Xian'en: Right, that's right.

Investigator: That portion of it.

Doctor Huang Xian'en: Yeah.

Investigator: So how much can we reimburse? That is, from the part for the hospitalization, and one for the postoperative medication, how much can be reimbursed?

Doctor Huang Xian'en: About 100,000 yuan.

Investigator: Do you have a cell phone?

Doctor Huang Xian'en: Yes.

Investigator: Um. Could you tell me the number? If there are any situations, I can contact you.

Doctor Huang Xian'en: 1350.

Investigator: Eh, let me jot it down, 1350.

Doctor Huang Xian'en: 300,

Investigator: 300.

Doctor Huang Xi Xian'en anen: 6786.

Investigator: 6786.

Doctor Huang Xian'en: Yeah.

Investigator: 1350, 300, 6786, right?

Doctor Huang Xian'en: Right.

Investigator: Yeah, well, Doctor Huang, I have another question here. My neighbor got it done in Guangzhou. I forgot which hospital he said he had it at. But at that time of his operation, they used one of those organs, that is to say, it was acquired, through some connections, from a Falun Gong practitioner. Can we still use that kind? That is, his father's health has been very good, for so many years, seven or eight years. He is still alive, still in good health.

Doctor Huang Xian'en: Yeah, but that is so hard!

Investigator: So, as my neighbor said, I don't know which hospital he did it at, but it was done in Guangzhou. At that time, they helped him find a donor, a Falun Gong practitioner. Can we still find that kind?

Doctor Huang Xian'en: As of now, if we're to do it, generally speaking, the donor quality would not be as good, which would have its implications in the long run, but it'd still be okay overall.

Investigator: Right, as for that, not the rejection by the donor, but the one (by the recipient) or the postoperative reactions, he said his father did not have such complications. It was very smooth. So if that's true, we also want to look for that kind.

Doctor Huang Xian'en: Well, if there is one available, it may be as good, or even worse. As for that thing, it is hard to say.

Investigator: Right. So now, if we still want to find that kind, could you help us find one? That is, from one of those practitioners....

Doctor Huang Xian'en: Then you'll have to wait, wait until there is a good one available, then you can get it done.

Investigator: So those from Falun Gong practitioners, we can wait for those, right?

Doctor Huang Xian'en: Didn't I tell you that such things depend on luck? If your tissue typing works well and the donor is good, then you may end up with very good results.

Investigator: We went through the assessment, yes. But, because the Falun Gong practitioners do not smoke or drink, and have good health, that is, they don't have any illnesses, no illnesses, so they are surely good in terms of drugs or all other aspects. Because my family member is still young, we hope he can....

Doctor Huang Xian'en: Those things...those things...those things we don't have. We do without those things.

Investigator: At your hospital, at your hospital, can you help me find one like that?

Doctor Huang Xian'en: No, those are all illegal. We cannot do such illegal things, okay?

Investigator: Okay? I, I will talk to you later.
